

2020 ACT elections: ISCCC Priority policies and actions for the incoming ACT government RESPONSE BY CANBERRA PROGRESSIVES

A. Streetscapes, Urban Forest and Open Spaces

The ISCCC's online survey of 555 residents clearly demonstrated the high value they place on their streetscapes, urban forest and open spaces. Therefore, the ISCCC advocates:

1. An ongoing program of better maintenance and renewal of the urban forest, verges and vegetation contributing to the streetscape.
2. Ongoing improvements to, and better maintenance of open spaces, parks and reserves, with Telopea Park being of particular concern.
3. Transparency about what's being done and community engagement to achieve better outcomes.

Canberra Progressives absolutely support the renewal of urban forests and the maintenance of parks, open spaces and reserves. It is part of the heritage of our Bush Capital and a green city is also a more climate-change ready city.

We wholeheartedly support better community engagement and transparency of decision making.

B. Planning priorities The next government must work hard to improve the trust, transparency and effective collaboration between the three main planning stakeholders: the community, the developers and the government. We should all be working towards a better city.

Changes to the Territory Plan

1.All the documentation must be easy for the layperson to understand. One-click on the block of interest and all the planning rules for that block become readily available.

2.Green spaces and the urban forest must be maintained in residential areas. Mandatory site coverage and planting-area rules should be added to the plot-ratio rule. The current government has committed to a 30% canopy cover and 30% planting area in Canberra's urban footprint, by 2045. The next government should commit to develop and implement a plan, and provide an adequate budget, to meet these targets, and to ensure better maintenance of parks, street trees and verges.

3.All the criteria in the building codes must be subservient to the rules, which are simplified and made mandatory. The current situation, in which subjective criteria override rules, lacks clarity and common sense. We need simple rules for key parameters such as height, setbacks, appropriate solar access, number of dwellings on the block and permeable/planting areas.

4.Knock-down rebuilds should be progressed through standard Development Applications. The situation regarding DA-exempt knock-down re-builds is completely unacceptable. Neighbours have to go through FOI requests to obtain copies of plans even though a knockdown re-build could affect the whole character of the street. All those living nearby should be able to access the plans before any demolition is approved.

5.Before making any zoning changes, the incoming Government must undertake meaningful community engagement with inner south residents about housing choice and diversity, including social housing, to ensure a reasonable balance between low, medium and high-density residential stock. Currently, the inner south has amongst the lowest proportions of detached dwellings of any Canberra District, and has the highest proportion of high-density residential development. 42% of dwellings are detached, while 45% are high density, and the remaining 13% are medium density.

Canberra Progressives want to see the completion of the Planning Review expedited to address many of the specific concerns raised.

We support a complete overhaul in order to create clarity, consistency and transparency in the planning and development. Public Consultation is clearly inadequate across a variety of proposed public and private developments.

Ministerial call in powers must be reviewed as a mechanism to bypass community consultation.

We support setting new minimum standards that reflect the need to design more appropriately for our rapidly changing climate including reviewing plot ratios and mandatory planting requirements as part of the commitment to maintaining green corridors and canopies.

We also want to see more attention to compliance among developers and more behavioural change through tough consequences.

C. Manuka to the Lake Before the 2016 Election the ACT Government gave a commitment to develop a Master Plan for the area from Manuka to the Lake. Nothing has happened. There appears to be an *ad hoc* approach based on whatever is proposed by any developer. We need a firm commitment from the next government to develop a Master Plan and a plan to improve amenity in the area.

D. Heritage Aboriginal culture and early colonial settlement speak to the history of this city, and add a rich background to the establishment of the National Capital. Since self-government, places and precincts of heritage value have been recognised by entry into the ACT Heritage Register. This process of nomination & recognition continues. However, in recent years the cumulative impact of alterations, demolitions & rebuilds has led to the erosion of the character of these places & precincts. It is essential that these highly-valued assets are maintained and conserved, not whittled away.

1. Allocate sufficient expertise and financial resources to address the inadequacy of Conservation Management Plans, which are intended to reflect and support the ACT Heritage Register requirements. This must be underpinned by timely enforcement of these legislated requirements.

2. Urgently progress the existing heritage listing process of Canberra's National Capital values with the Federal Government in full consultation with the ACT community. This process was supposed to have been completed in time for the 2013 centenary of Canberra and has been languishing for close to a decade.

Canberra Progressives have similar concerns about the inadequacy of Conservation Management Plans, We are concerned that the lack of funding and political will to address these inadequacies has resulted in a number of major Heritage protection failures. We cannot afford to lose these sites due to lack of clarity or proper consultation.

We support the call for a Manuka to the Lake Masterplan and we will expect the government of the day to honour the 2016 commitment.

We are very concerned about the declining levels of trust in the process of approvals, and the uncertainty and conflict that this creates in the community.

We support the call for the heritage listing process to be progressed as promised, engage the Federal Government and provide clarity, certainty and the protection that our National Capital deserves.

E. Transport 1. Identify areas for improvement in the bus network in the inner south, including by addressing concerns that have led many past bus users to give up on public transport.

2. Improve access to and maintenance of shared paths, pedestrian crossings and better street lighting.

3. Provide a publicly available and rigorous social cost-benefit analysis for Light Rail Stage 2, including a comparison with a comprehensive electric bus network.

4. Develop an integrated land use and transport policy (including all forms of transport) to avoid traffic congestion, focusing on the Civic to Woden (Commonwealth and Adelaide Avenues) corridor, the junction of Yarra Glen/Cotter Road/Adelaide Avenue, the Queanbeyan/Fyshwick to Civic transport corridor, and the

Manuka Precinct on Canberra Avenue.

5. Continue to negotiate with the NSW and Australian Governments to develop a faster reliable train link between Canberra and Sydney.

Canberra Progressives fully support an integrated land use and transport policy in order to determine the best transport approaches for our growing city. We want to see transparent and rigorous cost benefit analysis of Light Rail Stage 2, and we fully support more electric vehicles, both public and private to address the transport needs and climate impacts of our growing populations. We support a Fast Train project and would support negotiations to progress this project.

F. Waste Management

1. Commit to an ongoing waste management policy that rules out any future waste to energy plant, or waste facility leading to reduced air quality or other adverse health impacts, mass importation of waste from interstate, or that threatens the light industrial and bulk retail future of Fyshwick and residential future of East Lake.

2. Establish an air quality monitoring station in Fyshwick.

3. Consider the cumulative impact of current and proposed waste facilities in Fyshwick.

4. Change the ACT Territory Plan so that such major waste facilities are prohibited as a land use in Fyshwick.

Canberra Progressives greatly appreciate the huge amount of work done by the ISCCC on the ongoing issues of Waste Management Proposals in Fyshwick.

We fully support all of the ISCCC recommendations and would fully support a moratorium on any further Heavy Industrial Development Proposals, with a view to changing the current laws in Fyshwick
